Cybersecurity Maturity Model Certification 2.0 (CMMC) Services

Over 300,000 organizations process controlled unclassified information for Department of Defense (DOD) contractors and are required to meet Defense Federal Acquisition Regulation Supplement requirements. Is your organization included? If so, get ready. Your organization now will need to meet certain CMMC 2.0 requirements to continue doing business with the DOD.

The CMMC requirements were put in place to protect sensitive national security information across the defense industrial base. However, many organizations that do business with the federal government are struggling to understand how to meet the requirements. The process can be daunting to those unfamiliar with the policies, procedures, and practices necessary to achieve the desired level of CMMC 2.0 certification.

PONDURANCE IS HERE TO HELP YOUR ORGANIZATION FACE THIS CHALLENGE

We are a CMMC registered provider organization with registered practitioners on our team. We have the experience and skills to work effectively with your organization to help you achieve CMMC 2.0 compliance and better understand the gaps in your processes, capabilities, and practices across the CMMC domains.

WHAT WE DO

If your organization is seeking to meet compliance standards for the first time, one key success factor is a readiness assessment and gap analysis. The readiness assessment results allow your organization to focus its efforts on remediating gaps and weaknesses prior to an audit with an accredited third-party assessment organization and proving your final CMMC maturity level to the DOD.

Members of our skilled Compliance Advisory Services team will conduct a readiness assessment aligned with your desired CMMC 2.0 maturity level. This identifies any deficiencies across all relevant CMMC domains and related processes, capabilities, and practices, along with remediation recommendations. As part of the remediation effort, we can augment your capabilities with staffing.

YOUR IDEAL CMMC 2.0 PARTNER

Beyond providing readiness assessment and remediation, we can work with you to complete the additional steps to certification. We also offer Managed Detection and Response (Pondurance MDR) services and a comprehensive Vulnerability Management Program (Pondurance VMP), which provide a cost-effective approach to satisfy many of the CMMC controls, help you maintain your certification, and protect your organization from the rising threat of cybercrime.
